

# THE SITE STRUCTURE

This page shows a breakdown of the various components of a candidate focused, Nationbuilder starting point. The idea is that this would be the default structure, with sections being used as and when they are required.

**1** Content from different site sections pulled through and displayed on the home page if two conditions are met:

1. The section has content in it.
2. there is a tag present on the home page saying it should be displayed.

**2** Supporter nav displays these calls to action by default install, but they can be changed or turned off as the site is developed and content needs are refined.

**3** if there is no content in a section at this level it will not display on the home page even if the home page tag is present.

**4** Training documentation section is added to site with the initial install. This will contain all information and tutorials for how to use the site to it's fullest potential. It will only be visible to logged in admin users.

**5** All actions divert to 'Thank you' page after submission. This page consists of share options, latest content and potential actions from around the site that may also be of interest.

**6** Three step workflows set up for each site area where an action can be taken.

**7** Communication email theme set up with same branding as the rest of theme.

**8** Fully GDPR compliant privacy and cookies policies with pop up for users to accept on first visit.
